

Admibros Shipmanagement installs Blue Ocean Wireless GSM Solution

Dublin, Ireland, 10 December, 2007: Blue Ocean Wireless ("BOW"), an Irish company delivering GSM communication capability for the merchant maritime sector, today announced that, it has been chosen by Admibros Shipmanagement to provide GSM coverage for their fleet.

Admibros will initially install BOW's GSM solution on 8 of their container and tanker vessels. Using the BOW service, seafarers can, for the first time, make & receive voice calls and send & receive SMS messages using their existing mobile phones.

BOW continues to make significant progress in rolling out its product. To date, BOW has signed up over 150 vessels for installation. BOW has a strong market uptake and expects to grow installations as negotiations with major shipping groups continue.

Admibros, Fleet Director, Chris Christofides, commented, "The Blue Ocean Wireless service will allow our seafarers to enjoy the most innovative crew calling and sms solution of the maritime market. The solution separates crew communication from ship's business calls and allows crew for the first time ever to receive incoming calls and sms on to their mobiles. The solution also prepares us for the future since we will proceed with the Fleet Broadband upgrade".

Blue Ocean Wireless CEO, Robert Johnson said, "We are delighted to announce Admibros as a customer. This represents another significant customer milestone for Blue Ocean Wireless. We have a rapidly growing customer base and have made strong progress since our foundation less than one year ago."

About Blue Ocean Wireless

Blue Ocean Wireless is an Irish company focused on expanding communication capability in the merchant maritime sector. Blue Ocean Wireless provides, for the first time, GSM connectivity for seafarers in deep ocean water, where no other network exists. This allows users to make and receive voice calls, send and receive SMS text messages and, in time, browse the internet using their existing handsets. This technology can also be used, in conjunction with RFID technology, to track and monitor shipping containers while they are in transit at sea. Blue Ocean Wireless works in partnership with communications industry leaders including, Altobridge, JRC, Seacom, Smart and Stratos to provide the best products to its customers. About Admibros

Full range of high-quality and efficient ship management services

Admibros established in 1998, continues to expand its business activities from the East Mediterranean & Black Sea to the rest of the world. With its recent addition of 8 modern double-hull/double bottom oil & chemical tankers the fleet aggregates 16 such vessels ranging from 4,000 to 20,000 DWT. Every year, the fleet is able to perform about a thousand voyages and transport more than ten million tones of oil cargo. Our philosophy for clients pivots around their particular needs. Recognizing the intense environment where shipping activities are conducted, we work together with our clients to satisfy their needs and keep them informed at all times. Admibros Ship management Co. Ltd, Core Services: In addition to its core ship management activities, a broad range of maritime services are offered including, Quality/ISM/TMSA, Crewing, Financial, Consulting, Commercial and Agency services. Admibros Ship management has grown into a substantial organisation covering a wide range of service areas. Our motto is: "Quality starts with Quality Thinking"
